

CER ♦ TAB

Product Authentication

CerTab is a security element for product authentication. It allows the integration of **overt**, **covert** and **forensic** security features on one single label. Furthermore, it can be used for **track and trace**.

- **overt** visible laser engravings and / or holograms
- **covert** hidden images and / or dynamic effects, which can be made visible by a 'CerTab Key Card'
- **forensic** unique composition can be checked by spectroscopic analysis
- **traceability** data holograms or invisible barcodes can be read out by 'CerTab Reader'

CerTab is cost-effective. It can be provided in form of self-adhesive labels, which can be attached to a product or it can be an integral part of the packaging itself.

- tailor-made, customized labels
- adhesive layer to stick to various materials
- variation of geometry, size, thickness, colour, gloss...
- available on different liners as label strips or rolls
- integration of predetermined breaking points
